

AbleSpace — Caseload → Take Data

Product workflow review and UX/UI observations

Prepared for Full Stack Developer (Fresher) Technical Assessment

1. Purpose

The purpose of this exercise is to understand how AbleSpace supports data collection from the Caseload area, document the observed user workflow in my own words, and identify practical UX/UI or functionality improvements.

2. Starting Point — Caseload

From the Caseload screen, each student appears in a table with identifying and service-related information. The Actions column provides a “Take Data” action for the selected student. This creates a direct entry point from the student list into the data-collection workflow.

Part 2 – Product Understanding

Explore the AbleSpace Take Data screen from the Caseload tab.

Full Name	Last Name	IEP Due	Eval Due	Collaborators	Service Time	School	Actions
Demo Student1	Student1	11/06/2024	03/25/2020	J E +1	OT - 30mins/Wk	Demo School 1	Take Data
Demo Student2	Student2	03/02/2020	02/28/2020	J C +3	OT - 30mins/Wk, Spe	Demo School2	Take Data
Max Planck	Planck	09/06/2024	-	J M +3	30 Mins/Week		Take Data
Albert Einstein	Einstein	09/19/2024	-	J C +4	0		Take Data
Tim David	David	09/19/2024	-	J J +3	0		Take Data
Charles Darwin	Darwin	-	-	J J +3	0		Take Data
Marie Curie	Curie	-	-	J J +3	0		Take Data
Dwight Schrute	Schrute	-	-	C A +1	0		Take Data

Submit either a document with screenshots explaining the workflow in your own words or a video walkthrough. Share any UX/UI or functionality improvements you identify.

Submission Guidelines

Submit within 14 days. Review may take up to one month. Provide a public GitHub repository with multiple small, meaningful commits, a working deployed live URL (non-working URLs will be rejected), a README, and your Part 2 submission. Keep the repository public and deployment accessible for at least 45 days after submission.

Evaluation Criteria

Attention to detail, frontend skills, backend skills, component reusability, architecture, code quality, responsiveness, product thinking, communication, and maintainability.

Figure 1. Caseload screen showing the “Take Data” action for a student.

3. Observed Take Data Interface

After selecting “Take Data” for Demo Student1, the application opens a dedicated data-collection workspace. The screen is organized into a student/session header, a goal list on the left, and the main data-capture area on the right.

Figure 2B. Observed Take Data interface after selecting Demo Student1.

3A. Goals and Objectives Panel

The Take Data workspace includes a Goals panel on the left side of the screen. In the observed session, the panel showed “Goals (7/7)”, indicating that seven goals were available for the selected student. Each goal contains a title and a short description of the expected performance target.

The goals observed included Social Studies, Writing, Math, and Reading. The Math goal also displayed “2 Obj.” with numbered sub-objectives such as 3.1 and 3.2. These objectives represent more specific targets underneath the main goal and help define what is being measured.

From a workflow perspective, the Goals panel is important because it lets the user select the exact goal or objective that they want to record data for. This keeps goal selection and data capture in the same workspace instead of requiring the user to navigate to a separate screen.

Figure 2A. Goals and Objectives panel observed in the Take Data workspace.

4. Workflow and Screen Understanding

Interface area	Observed purpose / interpretation
Session context	The top bar shows the active session date/time and navigation controls. It also provides access to Accommodations and Services Not Tracked.
Student context	The selected student is shown as “Demo Student1,” with an option to add another student.
Goal selection	The left panel lists goals such as Social Studies, Writing, Math, and Reading. The selected goal is highlighted.
Data view	The main workspace includes Capture, Graph, Stats, and Info tabs, allowing the user to switch between collection and review contexts.
Trial context	The interface shows “Trial 1” with navigation arrows and a “Phase” action, indicating that data can be organized into trials/phases.
Goal instruction	The selected goal displays a clear instruction describing the expected performance and criterion.
Data capture	The central Capture area contains a large action control with a plus sign, suggesting the primary interaction for recording an observation/value.
Undo	An Undo control is visible above the capture area, supporting correction of the most recent entry.
Customization	A “Customize View” control allows the user to change what is shown in the workspace.

5. My Understanding of the Product Flow

1. Open the Caseload list and identify the student whose progress needs to be recorded.
2. Use the student's "Take Data" action to enter the data-collection workspace.
3. Review the student and session context shown at the top of the workspace.
4. Select the relevant goal from the left-side Goals panel.
5. Review the goal instruction and the current Trial / Phase context.
6. Use the Capture view to record the observation/value using the primary capture control.
7. Use Undo when a correction is required, and use Graph, Stats, or Info when a different view of the goal data is needed.

Scope note: The workflow above is based on the interface I directly observed. The screenshot captured the data-entry workspace before I completed a full data-entry/save cycle, so I have not assumed behavior that was not visible.

6. UX/UI Observations

Strong information hierarchy: The screen separates student/session context, goals, and the main capture workspace clearly.

Goal switching is efficient: The left-side goal list keeps multiple goals visible while allowing quick selection without leaving the workspace.

Primary capture action is visually prominent: The large center control makes the main data-entry action easy to locate.

Multiple views support different tasks: Capture, Graph, Stats, and Info provide a useful separation between recording data and reviewing it.

Dense top controls: The top bar contains several controls (session details, accommodations, services, customization, phase, and menu actions). New users may need time to understand these controls.

Context could be reinforced: Because several goals can be present, a persistent visual indicator for the active goal and current trial/phase could reduce the chance of recording data in the wrong context.

Goal hierarchy is clear, but long goal descriptions can be truncated in the sidebar. A subtle "expand/preview" interaction or a tooltip could make it easier to confirm the full target before recording data, especially for goals with multiple objectives.

7. Recommended UX/UI and Functionality Improvements

Make the active goal and trial more prominent

Increase the visual emphasis of the currently selected goal and Trial/Phase so the user can confirm the recording context before each entry.

Add a compact "entry status" indicator

After each capture, show a small confirmation such as “Recorded” with the latest value/time. This provides immediate feedback during repetitive data collection.

Reduce top-bar cognitive load

Group secondary actions such as Accommodations, Services Not Tracked, and overflow options into a clearer secondary menu while keeping the primary recording action visible.

Support faster repeated entry

Provide keyboard-friendly or large tap targets for repeated data collection so a user can record several observations quickly without moving between controls.

Improve responsive behavior

On smaller screens, keep the active goal and capture control fixed or easily reachable so the user does not need excessive scrolling while taking data.

Add a clear recovery path

Make Undo and the latest captured value easier to understand, especially when multiple entries are recorded rapidly.

8. Conclusion

The Take Data experience is designed around a clear data-collection workspace: select a student, choose a goal, confirm the trial/phase context, and record observations from the Capture view. The strongest opportunity for improvement is to make the recording context and feedback even clearer while reducing the number of visual decisions a user must make during repeated data-entry sessions.

9. Evidence Included

The document includes screenshots of the Caseload entry point and the Take Data workspace observed during the assessment.

10. Additional Observations from Data Capture and Review

10.1 Capture Interaction

During the Capture view, I tested the main “+” control directly. Each click increments the recorded value by one (for example, 0 → 1 → 2 → 3 → 4 and so on). The Undo control reverses the increment one step at a time (for example, 10 → 9 → 8 → ... → 1 → 0). This makes the interaction suitable for repeated frequency-style data collection and provides a direct way to correct accidental entries.

10.2 Graph View

The Graph tab provides a visual trend of the recorded values over time. In the observed example, the chart plots frequency on the vertical axis and dates on the horizontal axis, allowing the user to identify increases, plateaus, and changes in performance across sessions.

Figure 3. Observed Graph view for the selected goal, showing frequency over time.

10.3 Stats View

The Stats tab presents the underlying session-level records in a table. The observed columns include Session/Trial, Edited By, Frequency, and Notes. The screen also provides controls to add data, download data, and view more records, making it useful for reviewing the details behind the graph.

Figure 4. Observed Stats view showing recorded frequency values, notes, and session details.

10.4 Product Understanding Summary

From the observed workflow, I understand AbleSpace’s Take Data experience as a closed loop: the user selects a student and goal, records the live observation through a fast capture control, corrects mistakes when necessary, and then reviews the accumulated data through graphical and tabular views. This separation between Capture, Graph, Stats, and Info supports both real-time data entry and later review.

10.5 Evidence Used for This Review

- Caseload screen with the “Take Data” action for a student.
- Take Data Capture workspace for Demo Student1.
- Graph view for the selected goal.
- Stats view showing session-level frequency data and notes.

Goals and objectives panel showing 7 goals and Math sub-objectives.
